

Stop running paid group trips on WhatsApp and Excel.

TripOS is operations and payments infrastructure for repeat community-led travel organizers in India.

BUILT FOR

Paid trips with 10-80 travelers

CORE PROMISE

Payments, readiness, reminders, exports

CHANNEL STANCE

WhatsApp delivery, not chat ownership

The client pain

Group-trip teams sell through Instagram, WhatsApp, and communities, then operate the trip across payment links, screenshots, spreadsheets, forms, and chat follow-ups. The result is not just admin work. It is operational risk before departure.

Payment confusion

UPI screenshots, partial transfers, late payments, and unclear balances sit across chat, bank records, and spreadsheets.

Capacity uncertainty

Seats appear available until someone reconciles who has actually paid the Reservation Amount.

Readiness chasing

IDs, emergency contacts, travel logistics, and medical disclosures arrive late or get buried in threads.

Repeated coordination

Pickup points, packing lists, reminders, and changes are manually resent across WhatsApp groups.

POSITIONING

TripOS is not a travel marketplace, hotel engine, flight product, or WhatsApp clone. It is the system of record for paid group-trip operations: bookings, money, readiness, reminders, and exports.

A control room for paid group-trip operations.

The Organizer is the business, community, or brand that owns trips, payment setup, traveler records, and payout identity. Owners and Operators work from the same operational truth.

CAPABILITY	WHAT TRIPOS MANAGES	CLIENT OUTCOME
Trip launch	Public Trip Page, packages, capacity, Booking Availability, and launch checklist.	A professional booking entry point without pretending to be a marketplace.
Booking control	Booking Contact, Traveler Slots, Reservation Amount, Reserved and Confirmed booking states.	Seats are reserved only when the full booking reservation threshold is collected.
Money tracking	Provider Payments, approved Manual Payments, Financial Ledger, adjustments, and Payment Acknowledgements.	The team knows who paid, who owes, and what changed.
Readiness	Confirmation Requirements for documents, logistics, emergency contact, medical disclosure, and identity fields.	Bookings are confirmed only when operationally ready to travel.
Operations	Reminders, Announcements, Activity Log, and CSV Operational Export.	Less repeating, cleaner vendor handoff, and fewer day-before surprises.

The workflow clients understand immediately

- 1. CREATE**

Create a paid Trip with packages, capacity, dates, and Reservation Amount.
- 2. OPEN**

Open booking only when payment setup is ready, while still supporting approved manual payments.
- 3. RESERVE**

Reserve all travelers in a booking together only after the full reservation amount is collected.
- 4. CONFIRM**

Confirm bookings manually once documents, logistics, and other requirements are satisfied.

WHY THIS MATTERS

The organizer sees active reserved travelers, unpaid balances, overdue money, missing requirements, manual payment approvals, and operational exports without rebuilding the spreadsheet every day.

Run one upcoming paid trip through TripOS.

The best pilot customer is already selling repeat paid trips and currently coordinating payments and readiness through WhatsApp, Excel, Google Forms, and bank/payment records.

WEEK 1 Set up Configure one paid Trip, packages, Reservation Amount, payment setup status, and Confirmation Requirements.	WEEK 2 Collect Open booking, collect provider payments or approved manual payments, and issue acknowledgements.	WEEK 3 Prepare Use reminders for balance due and missing requirements, then review readiness before confirmation.	WEEK 4 Operate Run announcements and export the operational CSV for vendors, internal teams, and ground staff.
--	--	--	---

Ideal client fit Runs repeat paid trips, treks, retreats, or community experiences.	Handles 10-80 travelers per trip with deposits or staged payments.	Currently depends on WhatsApp, Excel, forms, and payment screenshots.

Success signals

Payment clarity Collected balance, due balance, overdue bookings, and refund due cases are visible without manual reconciliation.	Readiness clarity Missing traveler documents and operational requirements are visible before the trip start date.
Capacity control Available seats derive from capacity minus active reserved travelers, preventing overbooking before money is collected.	Cleaner handoff The operations team can export the trip data needed for offline, vendor, and ground-team execution.

TripOS helps trip organizers spend less time reconciling chaos and more time running the experience.
